/Gladys JP Corcoran/ Supervisory Patent Examiner, Art Unit 1797						

Continuation of 11. does NOT place the application in condition for allowance because:

Applicant's arguments filed 21 May 2008 have been fully considered but they are not persuasive.

Applicant's principle arguments are McNelly and Ouellette do not disclose the use of drains to remove condensate from all low points of the air ducts and heat exchanger.

In response, please consider the following remarks.

In column 4, line 66 to column 5, line 6, McNelly states that "some moisture will condense in the heat exchanger, and this moisture may be collected for further use in the system or may be released in the environment." It is common practice in the art to collect condensate from the low points of a heat exchanger using drains fed by gravity. This is evidenced by the Ouellette reference which states in paragraph [0115] that condensate accumulated on a sheet (Figure 2:156A) after interaction with a heat exchange pipe (Figure 2:161) is collected by troughs (drains). At the time of the invention, it would have been obvious to ensure that McNelly's apparatus included a plurality of drains located in communication with air ducts and heat exchangers to collect run-off condensation.

It is noted that according to 37 CFR 1.33 all Amendment sand other papers must be signed. Please ensure that all future papers sent to the office are signed in order to be properly considered. (See MPEP 403).
